

“VEREDUS” Riding Boot:
tradition meets the future

The VEREDUS boot is the cutting-edge technological and stylistic answer to the needs of a sport such as riding, which is very tied to the tradition but also constantly developing.

Horse shows and riding in general demand increasingly higher performance levels from both the horse and rider, and therefore this team needs suitable tools to achieve them.

The GUARNIERI boot features the following elements:

- **BOA SYSTEM:** boot **calf adjustment** using the “BOA System“ which allows the diameter of the boot to be varied, adapting it to the various calf sizes: This solution **almost completely satisfies the variables**, from the thinnest to the thickest calves.

The adjustment system also allows the rider to choose the required **degree of adherence of the boot to the calf** according to the activity done (walking, training, jumping or competition).

- **XT- GRIP:** On the inner part of the boot, in the area in contact with the saddle, there is an insert in a **special rubber compound** with electro-mechanical characteristics (mainly used in climbing footwear) offering exceptional grip of the boot on the saddle and **considerably increasing the stability and correct position of the rider.**

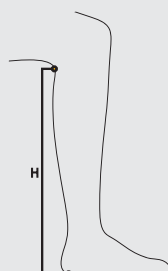

- **COMFORT ZONE:** The COMFORT ZONE has a stretch zone for satisfying the foot’s morphological variables, ensuring an exceptionally comfortable fit.

- **SPUR SUPPORT:** In the back there is a “spur holder” element. This element is a support specifically designed to **hold the spur in a precise and stable way.** There are **two vertical housings**, in order to be able to choose the preferred position.

- **TCS SOLE TECHNOLOGY:** The perfect anatomic shape of the sole together with the special polyurethane compounds ensure an extremely comfortable fit. The anti-twist system reduces the stresses transmitted to the foot during work-outs, reducing the feeling of fatigue and stress.

Stylistically innovative and featuring a design developed to optimise the grip of the boot in the most common stirrups available on the market. The particular **reverse pyramid design guarantees perfect stability of the boot in the stirrup.**
